

**“The International Collegiate Programming Contest is an algorithmic programming contest for college students. Teams of three, representing their university, work to solve the most real-world problems, fostering collaboration, creativity, innovation, and the ability to perform under pressure.”**

- from [icpc.baylor.edu](http://icpc.baylor.edu)

We typically depart for Youngstown State University after classes Friday to arrive in time for registration, a system demonstration, and practice contest that evening. We then eat dinner, stay in a hotel, and arrive bright and early the next morning for the real competition. It lasts from 10am-3pm and consists of approx. 10 problems. Last year was exciting because we had 2 teams successfully solve 2 problems each! Problem solving skills and the ability to think critically offer just as much to a team as coding ability, so don't let inexperience stop you from joining this great opportunity!
